Noida, Uttar Pradesh

Summary

Full-stack developer specializing in Nodejs, modern JavaScript and Typescript. Experienced in delivering end-to-end features across React/Next.js frontends and Node.js services with emphasis on correctness, performance, and maintainability. Skilled in designing API contracts, authentication and authorization workflows, data access layers, and state management. Proficient with both relational and document databases, applying schema design, indexing, and efficient querying to real product requirements.

Tech Focus:

React • Next.js • Docker • Node.js • Express • MongoDB • Redis • RESTful APIs • Auth & Session Handling • PostgreSQL • Git & GitHub
Performance Optimization • Problem-Solving

Education

Amity University Online, Noida
Bachelor's of Computer Applications

Jan 2023 - Present
CGPA: 8.34 (till 5th September)

Pilot Training Center, Delhi
Commercial Pilot License Course

Jan 2021 - Oct 2022
Trained on and cleared DGCA Exams

Wynberg-Allen School, Mussoorie
ISCE Curriculum

May 2020
Grade: 87%

Work Experience

Freelance Developer,
AOA Society Website

Feb 2025 - Oct 2025
Noida, India

- Recognized by the society for contributing to improved transparency and digital accessibility.
- Integrated a payment gateway and dashboard with UCO bank for society payments for various events and registrations.
- Designed workflows for OTP-based verification and secure certificate downloads through a ReactJS frontend.
- Dynamic PDF generation from templates, automatically embedding member details (name, flat number, etc.).

Projects

Debatrium

Online Debating Platform (ongoing)

- Designed and implemented a backend-centric MERN SaaS platform supporting secure PDF ingestion and LLM-driven debate analysis pipelines, including argument classification, counter-argument generation, scoring, and structured outputs.
- Built a production-grade authentication and API security layer using Zod, JWT with HttpOnly cookies, refresh-token rotation, RBAC, request-scoped rate limiting, and MongoDB injection hardening.
- Optimized backend performance and AI throughput via token-aware document chunking, async job orchestration with Inngest, content-hash deduplication, and compound indexed queries—reducing response latency and inference cost.
- Deployed and operated a containerized backend architecture using Docker, NGINX reverse proxying, and CI/CD pipelines, with planned Redis-backed caching, queues, and real-time AI voice interactions using Vapi.

PairCode

Collaborative Coding Interview Platform

- Built a real-time coding interview platform featuring a VSCode-powered code editor, 1-on-1 video rooms and live chat using Stream.io
- Implemented secure authentication with Clerk, room locking (2 participants only), and isolated code execution with automated test-case-based feedback (pass/fail).
- Designed a dashboard with live stats and a solo practice mode, using TanStack Query for efficient data fetching and caching.
- Integrated background jobs with Inngest, maintained a Node.js & Express REST API, followed GitHub PR workflows, and deployed on Render and Netlify.

Certifications

- JavaScript Certification — Udemy (2024)
- MERN Stack Development — Offline Course at GeekForGeeks (May 2025 - August-2025)
- Next.js Certification — Udemy (2025)
